

Lucy Dundon Artist Website — Setup Guide

What's in this folder

 Your Website Folder	
— index.html	← Your website
— IMG_0003.jpeg	← Home page hero image
— IMG_0001.jpeg	← About page hero image
— netlify.toml	← Tells Netlify how to run your site
— package.json	← Installs Stripe on the server
— SETUP.md	← This guide
— netlify/	
— functions/	
— create-payment-intent.js	← Secure payment backend

Step 1 — Create your Stripe account

1. Go to **stripe.com** and sign up (free)
 2. Complete your business details so you can receive payouts
 3. Go to **Developers → API Keys**
 4. Copy your **Publishable key** — it starts with `pk_live_`
 5. Copy your **Secret key** — it starts with `sk_live_`
 6. Keep these safe — never share the secret key
-

Step 2 — Add your Stripe publishable key to the website

1. Open `index.html` in a text editor (TextEdit on Mac, Notepad on Windows)
2. Press **Cmd+F** (Mac) or **Ctrl+F** (Windows) and search for:
`pk_live_YOUR_PUBLISHABLE_KEY_HERE`
3. Replace it with your actual publishable key, e.g.: `pk_live_51ABC123...`

4. Save the file
-

Step 3 — Deploy to Netlify

1. Go to **netlify.com** and create a free account
 2. From your dashboard click **"Add new site" → "Deploy manually"**
 3. Drag and drop your **entire website folder** onto the upload area
 4. Your site goes live instantly on a URL like `https://lucydundon.netlify.app`
-

Step 4 — Add your Stripe SECRET key to Netlify

This is the secure step — your secret key lives on Netlify's servers, never in your website files.

1. In Netlify go to **Site configuration → Environment variables**
 2. Click **"Add a variable"**
 3. Key: `STRIPE_SECRET_KEY`
 4. Value: your secret key (starts with `sk_live_`)
 5. Click Save
 6. Go to **Deploys** and click **"Trigger deploy"** to restart with the new key
-

Step 5 — Connect your domain

1. In Netlify go to **Site configuration → Domain management**
 2. Click **"Add a domain"** and type `lucydundonartist.com`
 3. Netlify will show you nameserver addresses (e.g. `dns1.p05.nsone.net`)
 4. Log into wherever you bought your domain and update the nameservers to Netlify's
 5. Wait up to 1 hour — your site will be live at `www.lucydundonartist.com`
-

Step 6 — Add your artwork to the shop

When you have product photos ready, for each artwork in `index.html` find the product card and:

1. Replace the placeholder div with an image tag:

```
<!-- BEFORE -->
<div class="p-placeholder"><p>Add product image</p></div>

<!-- AFTER -->

```

2. Update the title, description, category and price

3. Update the `onclick` price to match:

```
onclick="openCheckout('Woven Vessel No.1', 'Wall Work', 480, 1) "
```

4. Save and re-upload the folder to Netlify

Marking a work as Sold

When a piece sells:

1. Change the buy button to: `<button class="buy-btn sold" disabled>Sold</button>`
2. Add the sold badge inside the product image div: `<div class="p-badge sold">Sold</div>`
3. Move the product card HTML to the Archive page when ready
